SITI HAJAR ALIYA BINTI ABDUL HAFIZ 2023365385

Preface

The purpose of this report is to provide a detailed overview of the *Hotel Management System project* for review as part of a professional portfolio. Since the actual project files are too large to include, this report serves as a substitute for outlining the key elements, processes and solutions implemented throughout the project.

1.0 INTRODUCTION

Serene Oasis, located in the heart of beachside in Malacca, offers a blend of luxury, comfort and convenience for both business and holiday travelers. With its great location and top-quality service, it stands out as a top choice for visitors.

In this Hotel Reservation System, the most important thing we need to focus on is managing data effectively. Since we'll handle customer details, bookings and history, the system must be **secure, organized and efficient**. It will help hotel staff stay on top of everything and avoid confusion.

This project aims to replace old, outdated booking systems with a **simple and user-friendly website**. Guests will be able to check room availability and see the total cost easily.

By using this new system, hotels can avoid overbooking, improve guest experience, and run more smoothly. It also helps the hotel learn more about guest preferences, which can be used to **set better prices and improve marketing**.

Overall, this system aims to make booking easier for guests and support hotel growth in a competitive market.

Problem statement:

1. Issues with reservations and availability

- **Problem:** Customers frequently have trouble determining the availability of rooms in real time and quickly making reservations.
- **Solution:** Create a reliable reservation system that facilitates easy booking and offers real-time information on room availability.

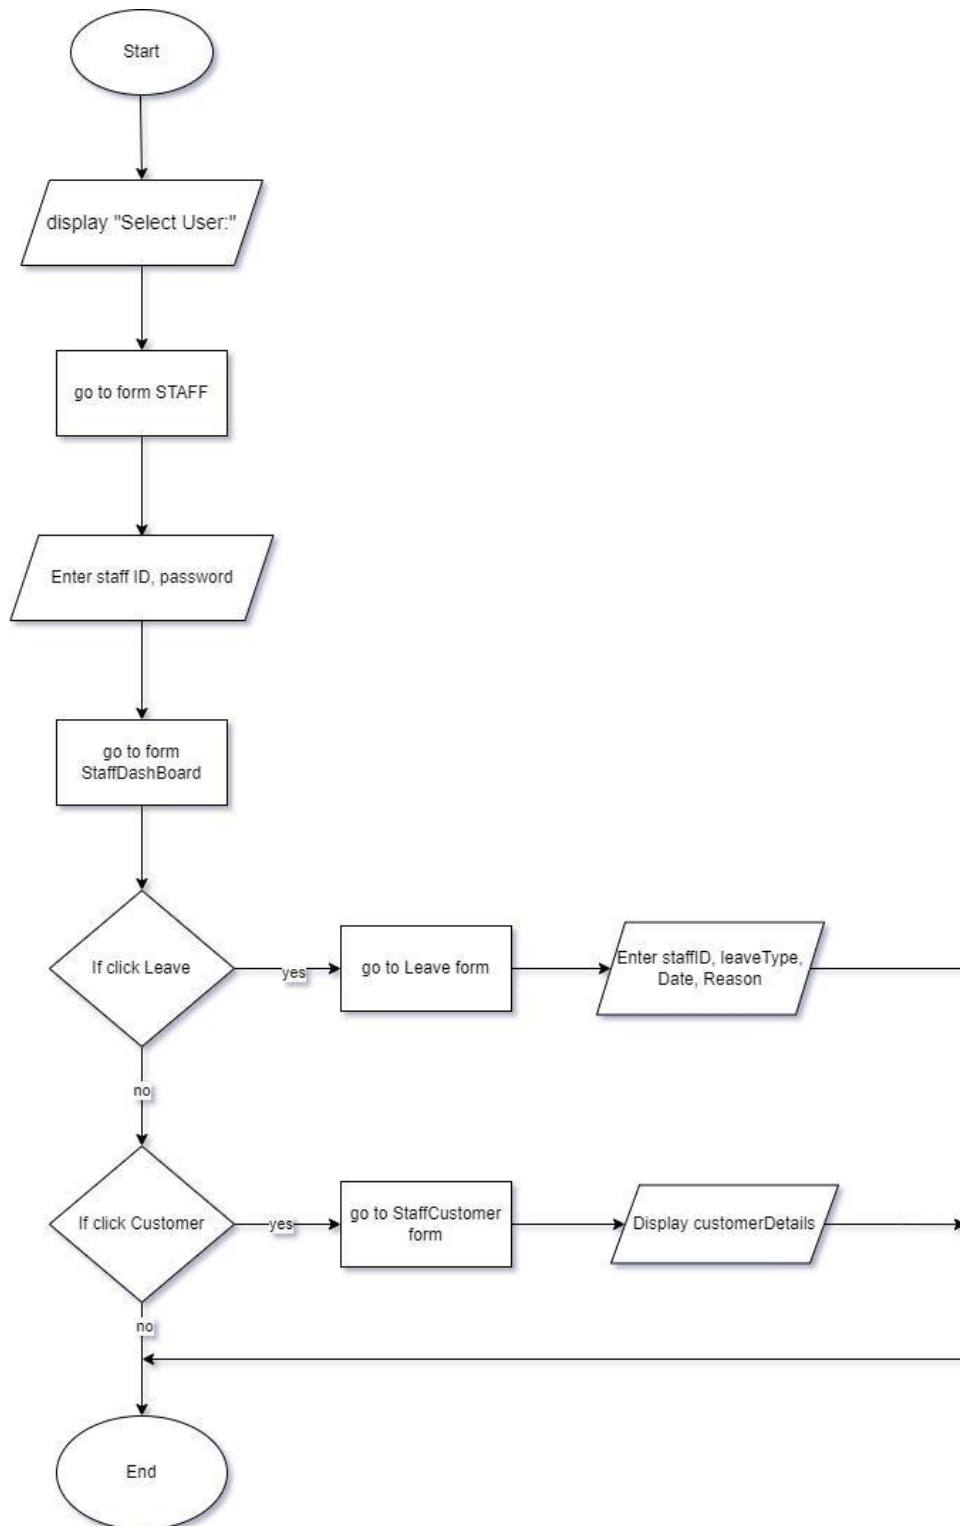

2. Customer Information administration

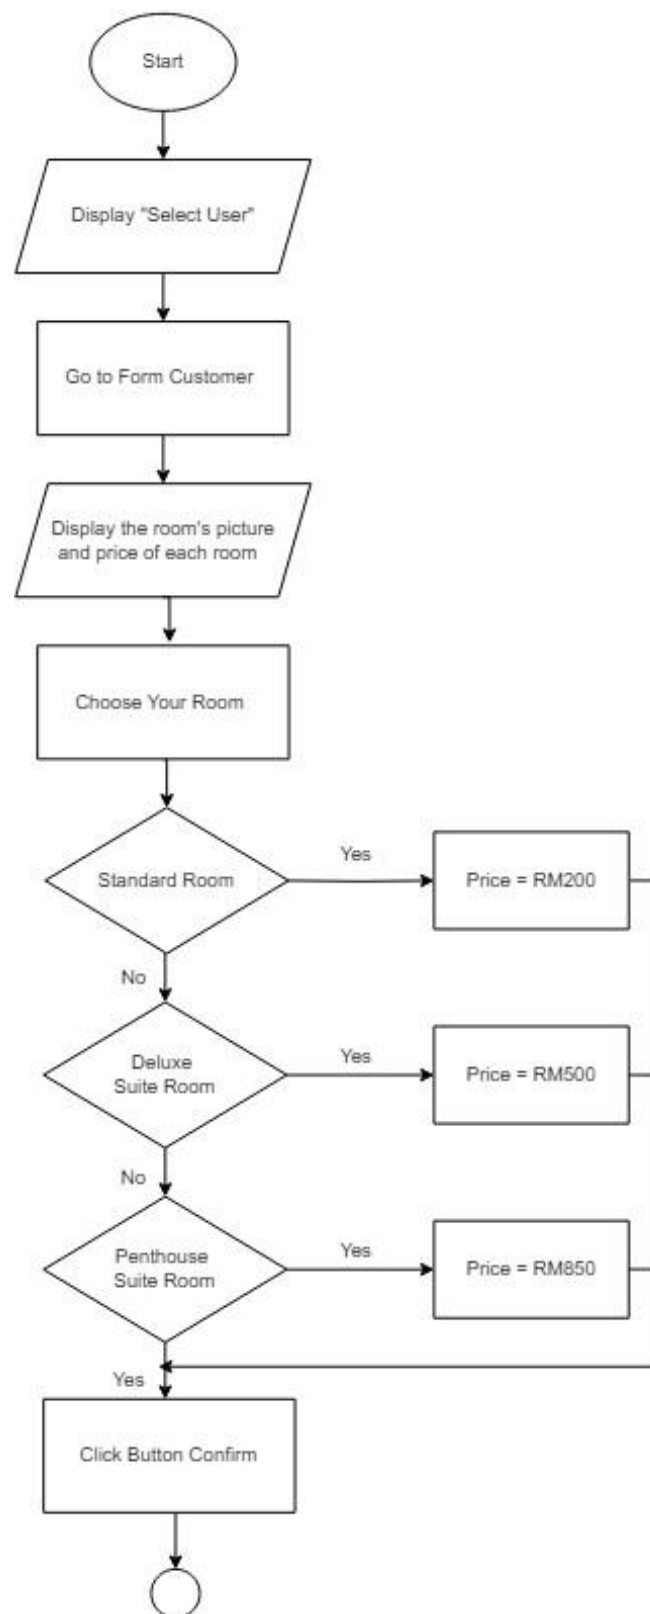

- **Problem:** Inaccurate and scattered customer information results in poor customer support and ineffective management.
- **Solution:** Establish a centralized database to handle client preferences and history in order to raise service standards and boost productivity.

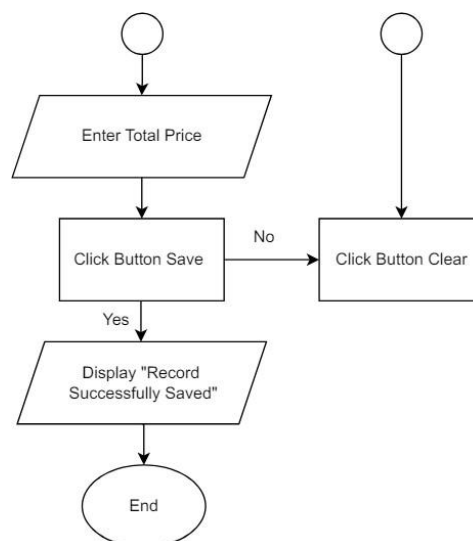

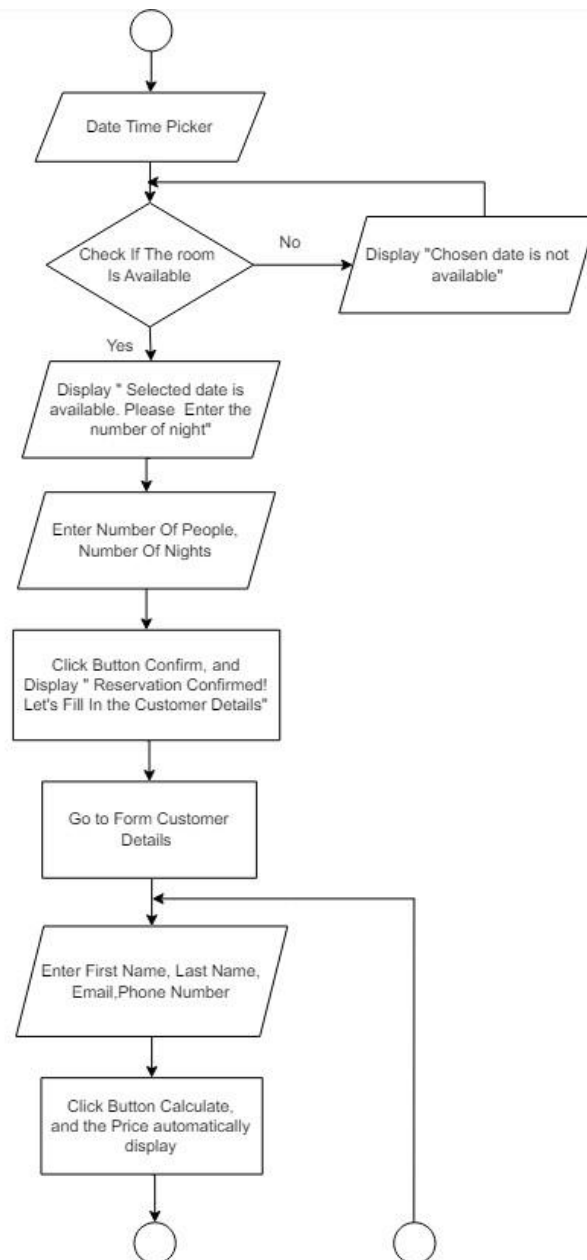

3. Data Management

- **Problem:** Poor handling of customer data and reservation details can lead to confusion and delays service.
- **Solution:** Implement secure methods for storing and managing customer and reservation data.

2.0 FLOWCHART

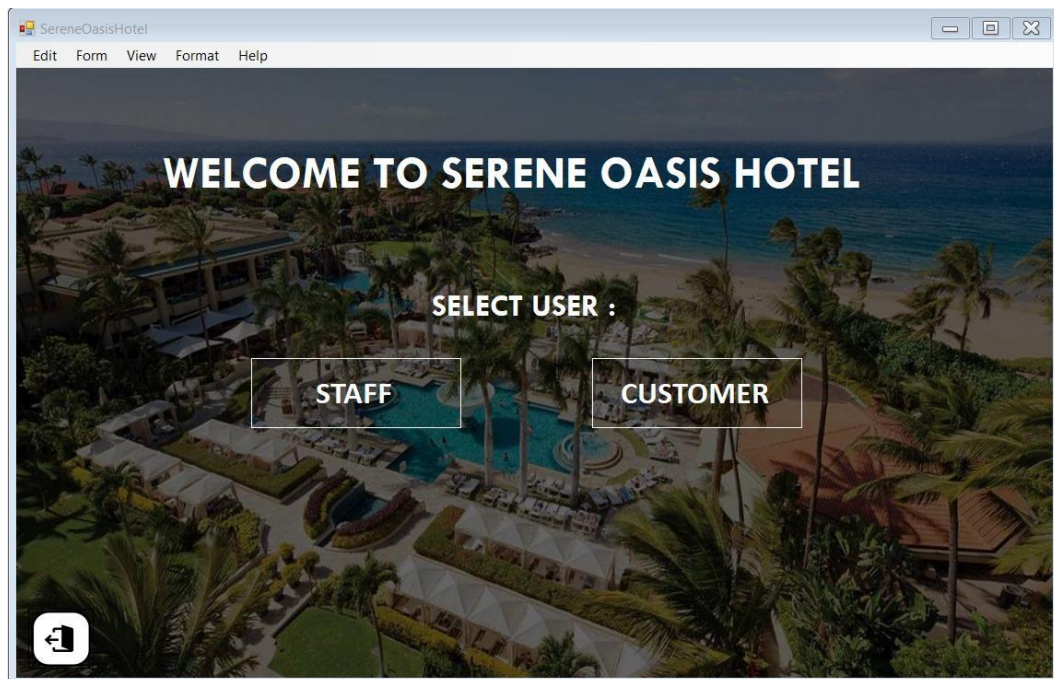

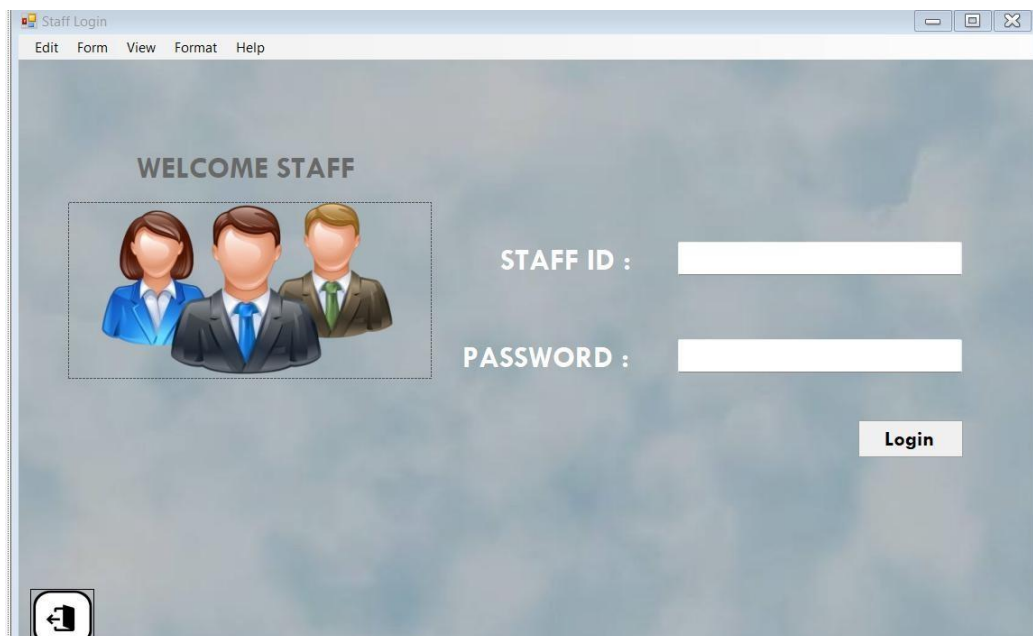

3.0 INTERFACES

SereneOasisHotel Form

The main purpose of this interface is to direct users to the appropriate section of the application based on their role which is a staff or a user. If the user click the staff button, it will direct them to the staff login form. If the user click customer button, it will direct them to rooms form.

Staff Login Form

This interface allow staff to enter their staff ID and password to login to the system. After they click the login button, it will direct them to StaffDashboard form.

StaffDashboard Form

The screenshot shows a web application window titled "StaffDashboard". It features a top navigation bar with links: "Edit", "Form", "Attendance", "Leave", and "Customer". On the left side, there is a sidebar with two buttons: "Leave" and "Customer". The main content area displays a welcome message: "Welcome aboard! The entire team of Serene Oasis is thrilled to welcome you on board. We hope you'll do some amazing work here!". Below the text is an illustration of four staff members (three men and one woman) in red uniforms, standing in a hallway with potted plants and framed pictures on the wall.

The interface allow staff to choose a leave button or a customer button. The leave button will direct the staff to the leave form to apply their leave. The customer button will direct the staff to StaffCustomer form that will display all customer booking information.

Leave Form

The screenshot shows a web application window titled "LeaveForm". It contains a form with the following fields: "Staff ID" (text input), "Leave Type" (dropdown menu), "Date" (text input), and "Reason" (text area). To the right of the "Reason" field are two buttons: "Clear" and "Apply".

This form allow staff to apply a leave. The staff need to enter staff ID and leave type which is sick, casual, annual, maternity or leave without pay. Then, enter date and a reason. After enter all the information, the staff need to click the apply button.

*										☐

This interface purpose is to display all booking details that customer has booked.

Rooms Form

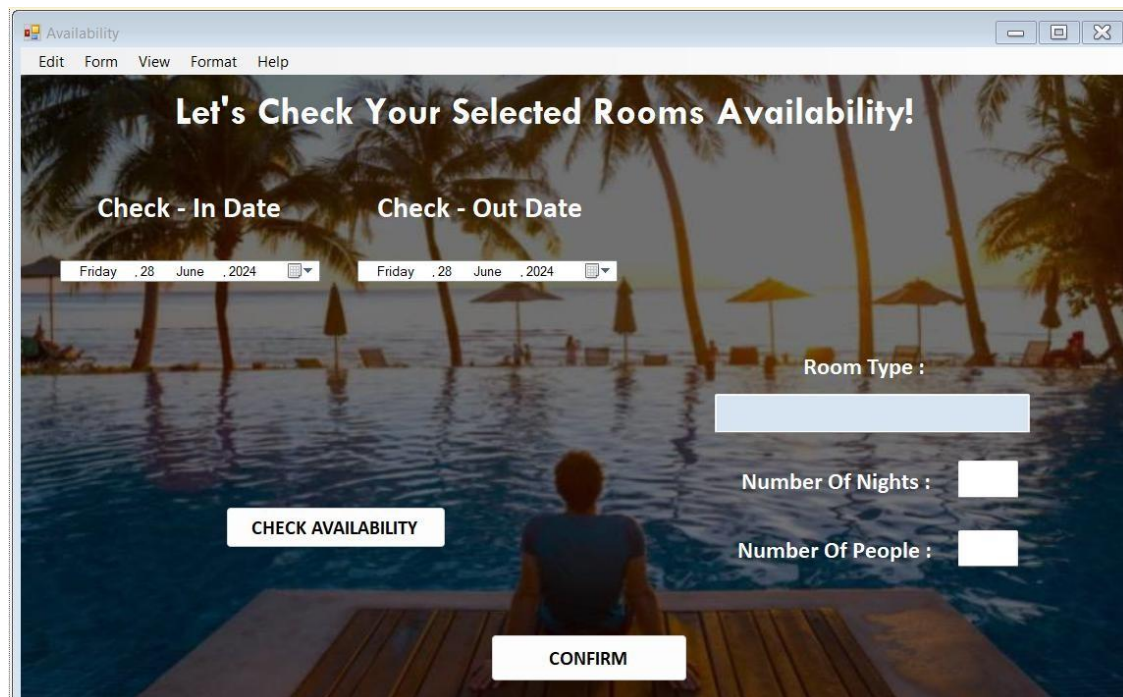

The screenshot shows a web application window titled "Rooms" with a menu bar containing "Edit", "Form", "View", "Format", and "Help". The main heading is "Choose Your Room". There are three room options, each with a radio button, a name, and a price:

- ☐ **Standard Room** RM200
- ☐ **Deluxe Suite Room** RM500
- ☐ **PentHouse Suite Room** RM850

Each option has a corresponding image of the room. Navigation arrows are present around the images. A "CONFIRM" button is located at the bottom right.

This interface lets customers choose a room type at Serene Oasis: **Standard Room**, **Deluxe Suite** or **Penthouse Suite**. After selecting a room, click "**CONFIRM**" to go to the availability form.

Availability Form

The screenshot shows a web application window titled "Availability" with a menu bar containing "Edit", "Form", "View", "Format", and "Help". The main heading is "Let's Check Your Selected Rooms Availability!". The form includes:

- Check - In Date**: A date picker showing "Friday, 28 June, 2024".
- Check - Out Date**: A date picker showing "Friday, 28 June, 2024".
- Room Type**: A text input field.
- Number Of Nights**: A text input field.
- Number Of People**: A text input field.

There are two buttons: "CHECK AVAILABILITY" and "CONFIRM". The background image shows a person sitting on a wooden deck overlooking a swimming pool and a tropical beach.

This interface is for checking the availability of hotel rooms. Choose your check-in and check-out dates using the drop-down calendar for easy date selection. Enter how many nights you'll stay and how many people are coming. Click "**CHECK AVAILABILITY**" to see if rooms are available. If they are, click "**CONFIRM**" to proceed booking.

CustomerDetails Form

The screenshot shows a software application window titled "CustomerDetails". It features a menu bar with "Edit", "Form", "View", "Format", and "Help", and a search bar labeled "Type Here". The main content area has a background image of a swimming pool at night. At the top, the title "CUSTOMER DETAILS" is centered. Below this, there are input fields for "FIRST NAME :", "LAST NAME :", "EMAIL :", "PHONE NUMBER :", and "TOTAL PRICE :". A "SAVE" button is positioned next to the "TOTAL PRICE :" field. On the left side, there is a "Price" section with a list of items and their corresponding input fields: "Room Price :", "Cleaning Fee :", "Tax :", and "Total :". Below this list, a message reads: "Enter Calculate and Insert your Total Into the Total Price also Make Your Payment!". At the bottom of the window, there are three buttons: "CALCULATE", "CLEAR", and "EXIT".

CUSTOMER DETAILS
